Projects

Rotation Tracker for Temple's School of Podiatric Medicine

- Worked as part of a five-member team on a web application for medical students and administration that creates and keeps track of schedules for medical clerkships of upper level medical students.
- Critically analyzed functional requirements with the team based on bi-weekly meetings with the client.
- Worked on app design including: user cases, data modeling, and user experience.
- Developed code for the entire front-end of the system, as well as back-end functionality.

QuizFlash Web Application

- Web app that features flashcards that users can create, edit, and study from.
- Client-Server system with Multi-Tier architecture that includes a complete login system with user registration and security functions.
- Used ASMX SOAP and ASP.NET Core REST web apis that used serialization to send and receive form data in JSON and XML.
- Used stored procedures in Transact-SQL to perform database functions.
- Included dynamic data displays and custom user controls using ASCX.
